

CS51 Project: README

Project name: Japanese Mahjong Hand Helper

Name: Mason Tan

Email address: mtan810@gmail.com

Instructions

The instructions for running this application is fairly straightforward. The project has been developed and tested using the CS50 appliance (version appliance50-2014). As long as your Linux distro has ocaml installed, you will be able to run this application.

There are three files in the project: hand.ml, main.ml, and Makefile. Using the 'make' command in the terminal with these three files in the same directory will output a 'main' object which can then be run with './main' (excluding the quotes). Once you run the command, the application will start.
